Measurements and their Uncertainties: A practical guide to

Uncertainty is a situation which involves imperfect or unknown information. It applies to predictions of future events, to physical measurements that are already made, or to the unknown.

Uncertainty due to GPS accuracy The accuracy of the coordinate data reported by a GPS varies with time, place, and equipment used. Previous to the order to cease Selective Availability (deliberate GPS signal scrambling) at 8PM EST 1 May 2000, uncorrected GPS receivers were subject to artificial inaccuracies of about 100 meters.

Metrology is the science of measurement. It establishes a common understanding of units, crucial in linking human activities. Modern metrology has its roots in the French Revolution's political motivation to standardise units in France, when a length standard taken from a natural source was proposed.

In response to those who complained in my recent post that linear trends are not a good way to compare the models to observations (even though the modelers have claimed that it's the long-term behavior of the models we should focus on, not individual years), here are running 5-year averages for the tropical tropospheric temperature, models ...
