Impulse J produced from time t 1 to t 2 is defined to be $J = \int_{t_1}^{t_2} F dt$ where F is the resultant force applied from t 1 to t 2. From Newton's second law, force is related to momentum p by

ABSTRACT. In hydrostatics, the Archimedes principle predicts an upward force whenever a body is submerged in a liquid. In contrast to common sense, this physical law is not free of exceptions, as for example when the body touches the container.

A downward buoyant force experiment - SciELO

In electromagnetism, charge density is the amount of electric charge per unit length, surface area, or volume. Volume charge density (symbolized by the Greek letter ρ) is the quantity of charge per unit volume, measured in the SI system in coulombs per cubic meter (C/m^3), at any point in a volume.

Il momento di inerzia misura l'inerzia del corpo al variare della sua velocità angolare, una grandezza fisica utile per descrivere il comportamento dinamico dei corpi in rotazione attorno ad un asse.
